DTS
NIS2 WORKSHOPS

The new directive for Network & Information Security (NIS2) is a major EU regulatory initiative to strengthen cybersecurity. NIS2 aims to increase resilience to the growing cyber threat with specific requirements and to better protect organizations, critical infrastructures and digital services. Similar to the EU GDPR, implementation here also poses major challenges for many companies. Do you need support and a strong partner to accompany you on your individual NIS2 journey? DTS picks up your thread and helps you throughout the entire process towards compliance with the directive.

In our workshops, we ensure that there is a clear understanding of the objectives, requirements and implementation of NIS2. We work with you to develop strategies for the most effective technological and organizational implementation of NIS2 requirements. We ensure a clear understanding of how to meet the NIS2 needs in your organization while remaining compliant. And last but not least, we create a significant awareness of the importance of cybersecurity and NIS2, why it is so important to create a complete security culture - shaping security and securing the future with DTS!

- Clear understanding of NIS2

- Development of implementation strategies

- Ensuring compliance

- Raising awareness for integrated IT security in the context of NIS2

WORKSHOP NIS2 - SHAPING SECURITY, SECURING THE FUTURE

Is NIS2 more than just a buzzword? Our NIS2 workshop is the key to strengthening your IT security. In our interactive workshop, we not only shed light on the latest threats in the digital world, but also present you with all the requirements and prerequisites relating to NIS2 as well as proven strategies for a secure security network. Together with our experts, you will not only gain theoretical knowledge, but also clarify all questions in a personal and individual exchange. IT security starts here - be part of it!

Goals:
1. Increase understanding of NIS2 and current threats to the security of information systems
2. Communicating best practices for detecting, preventing and responding to security breaches
3. Joint development of a holistic security strategy

In an intensive personal exchange, all requirements and prerequisites are highlighted and your awareness of the threats in the digital world is heightened.

WORKSHOP RISK MANAGEMENT - UNDERSTANDING RISKS, EXPLOITING OPPORTUNITIES

An important requirement of NIS2 is the legal and regulatory introduction of risk management. Together with you, we analyze which risk management measures are already in place and how these can be used to link risk management with information security. If such measures are not yet in place, we work with you to evaluate the options and support you in implementing the requirements of NIS2. Risk management is an important key component of a forward-looking strategy.

Goals:
1. Providing a sound understanding of risk management in connection with NIS2
2. Identification, evaluation and control of existing risk management measures
3. Proactive risk avoidance and management or implementation of risk management

WORKSHOP INFORMATION MANAGEMENT SYSTEM (ISMS) - A GUIDE TO YOUR INFORMATION LANDSCAPE

In an increasingly connected and digitized world, the security of sensitive data is paramount. Our workshop offers an in-depth exploration of the importance of ISMS and its critical role in today's business landscape.

In the workshop, we will highlight not only the basics of ISMS, but also the many facets that make it an indispensable element to the success and integrity of organizations. From protecting against cyber threats to promoting innovation, we will cover the breadth of what an effective ISMS entails. This workshop is not only an opportunity to understand the importance of ISMS, but also a platform to develop concrete strategies for implementation and optimization in your organization. We will not only look at current threats, but also look to the future to ensure your organization is ready for the ever-changing risks

WORKSHOP FOR TECHNICAL & ORGANIZATIONAL MEASURES (STATE OF THE ART) - TECHNOLOGY IN LINE WITH THE ORGANIZATION

In terms of technology, NIS2 relies on the development of uniform security standards and certifications. In terms of organization, NIS2 relies on risk management and emergency plans in order to be able to react quickly and effectively to security incidents.

In our workshop, we discuss and define the necessary technical and organizational measures for all processes and structures to meet the requirement (in accordance with the previous publications on NIS2).

We analyze the classified data and information and derive the appropriate measures from this.

We are happy to support you with the implementation!

Goals:
1. Discussion of the synergy between technology and organization
2. Identification of suitable measures

WORKSHOP STATE OF THE ART - SAFETY IN TECHNOLOGY

For individual technical areas, requirements or concepts, we jointly analyze the existing measures and compare them with the "state of the art" requirements. Recommendations for action are discussed and documented. Laws and legal regulations, but also guidelines and technical recommendations/publications are used as specifications.

Goals:
1. Sensitization of safety awareness
2. Analysis of suitable measures
3. Development of innovation potential
